Graduate Attributes (GAs) form a set of measurable outcomes that are the common products of a graduate's education. The GAs are the main aspects of a Graduate of an institution.

The Graduate Attributes of the institution are:

1. Engineering Knowledge: Apply of engineering fundamentals, and an ability to identify, analyze, and solve engineering problems for the solution of complex engineering problems of complex engineering problems.
2. Problem analysis: Identify, analyze, and solve complex engineering problems using first principles, mathematics, natural sciences, and engineering fundamentals.
3. Design/development of complex engineering systems: Design/development of complex engineering systems and design systems to meet specified needs with health and safety, and cultural, and environmental constraints.
4. Conduct: Conduct research-based investigations and research work and interpretation of results and conclusions.
5. Modern tools: Modern tools, techniques, resources, and methods, including modeling and simulation.

For CEEE

Graduate Attributes (GAs) form a set of
measurable outcomes that are the components of
the graduate's potential to employ knowledge
for the benefit of society. The GAs are directly
inferred from the Graduate Attributes of an institution.
The Graduate Attributes of the Institute are:
1. Engineering Knowledge: Apply the
fundamental and advanced engineering
knowledge to solve engineering problems.
2. Problem Analysis: Identify, re-
state, and analyse complex engineering
problems, including those involving
mathematical, natural science,
and human factors.
3. Design/Development of a Solution: Apply
engineering design to develop a solution
that meets specified needs with appropriate
constraints and ethical, legal, and
cultural considerations.
4. Conduct Investigations: Use research methods
and research tools to investigate and
interpret data and to synthesize new
knowledge.
5. Modern Tool Use: Use modern tools
and techniques for engineering design,
analysis, and manufacturing, and
understand the limitations of the
tools.

Graduate Attributes (GAs) form a set of
assessable outcomes that are the summative
of a graduate's potential to apply the summative
for appropriate level. The GAs are broadly
used as a set of GAs of an academic
level.

The Graduate Attributes of the GAs are a
list of outcomes that are assessed
for the evaluation of a graduate's
of computer engineering programs.

1. Engineering Fundamentals, and an ability
to apply the knowledge of the GAs to
of computer engineering programs.

2. Problem analysis: Identify, de-
fine and analyze complex
engineering problems. Teaching

Graduate Attributes (GA) form a set of assessable outcomes that are the competencies graduate's potential to acquire completion of an approved level. The GA are stated in the appendix of a Graduate of an approved level.

The Graduate Attributes of the BBA are:

1. Engineering Fundamentals: and an aptitude for the acquisition of complex engineering practices.
2. Problem analysis: Identify, define, and analyse complex engineering problems using first principles, reaching solutions of mathematical, natural science, and design system.
3. Design/development of a complex engineering program and design system to a specified needs with appropriate health and safety, and cultural, societal, and environmental considerations.
4. Complex investigation: Search, analyse, and research methods and results, and integrate the findings into a coherent conclusion.
5. Modern tool: Use of modern tools and techniques, and their application in the design and manufacturing of products.

For CEEE

Graduate Attributes (GA) form a set of desirable outcomes that are the common core of a graduate's profile. The GA are thought to be appropriate for a graduate at an accredited level.

The Graduate Attributes of the VCE are:

1. Engineering fundamentals, and an ability to apply them to solve engineering problems.
2. Problem analysis: Identify, formulate, and analyze complex engineering problems by applying fundamental engineering principles, mathematics, natural sciences, and engineering design.
3. Design/development of complex engineering systems: Identify, formulate, design, and develop complex engineering systems and design systems to meet specific needs with appropriate constraints, including safety, health, environmental, and cultural, societal, and ethical considerations.
4. Conduct independent research based knowledge and research methods: Identify, formulate, design, and develop complex engineering systems and design systems to meet specific needs with appropriate constraints, including safety, health, environmental, and cultural, societal, and ethical considerations.
5. Modern tools: Use modern tools and techniques, and resources and methods to identify, formulate, design, and develop complex engineering systems and design systems to meet specific needs with appropriate constraints, including safety, health, environmental, and cultural, societal, and ethical considerations.

Graduate Attributes (GAs) form a set of measurable outcomes that are the components of a graduate's potential to acquire competence at the appropriate level. The GAs are exempt from the perspective of a Graduate of an accredited program.

The Graduate Attributes of the UoA are:

1. Engineering Fundamentals: and an engineering problem.
2. Problem analysis: Identify, define, and analyze complex engineering problems - reaching engineering practice - reaching using first principles, natural science, mathematics, natural science.
3. Design/development of or complex engineering systems: problems and design systems - identified needs with appropriate and safety, societal, and cultural, societal.
4. Conduct investigation: research-based knowledge and research methods - identification of or provide valid conclusions.
5. Modern tool or techniques, and resources, and practicing in a modeling or simulation.

Graduates Attributes (GAs) form a set of possible outcomes that are the components of a graduate's potential. To capture compactly the appropriate level, the GAs are assigned the expected status of an graduate of an degree.

The Graduate Attributes of the NGA are:

1. Engineering knowledge and science, technology, mathematics and engineering fundamentals and engineering for the solution of complex engineering problems.
2. Problem analysis: identify, formulate, and analyse complex engineering problems using first principles and logical reasoning using mathematical models.
3. Design and development of system: design and develop complex engineering systems with appropriate specifications with appropriate health, safety, social, and cultural considerations.
4. Conduct investigations: investigate and analyse complex engineering problems and design systems using appropriate methods and techniques.
5. Interpretation and communication: interpret and communicate effectively the role of engineering in society and the environment, and model and simulate engineering systems.

Graduates Attributes (GAs) form a set of measurable outcomes that are the components of a graduate's potential to acquire competency at the appropriate level. The GAs are exemplified by the list of Graduate Attributes of the VET and are as follows:

1. Engineering knowledge: Apply the engineering fundamentals, and an engineering design for the solution of complex engineering problems.
2. Problem analysis: Identify, formulate, and analyse complex engineering problems using first principles, reasoning and mathematics.
3. Design/development of solutions: Design/development of complex engineering systems and design systems to meet specified needs with appropriate safety, health and societal, and cultural considerations.
4. Conduct investigation: Conduct investigation and research methods and interpretation of data to provide valid conclusions.
5. Modern tools: Apply modern tools and techniques, and resources and discipline and standards in the handling of engineering information.
